Summer, 2015

Data management, protection (security and disaster recovery), backup, and cloud storage company

- **Fully developed** a Mac application to quickly and securely back up an **entire computer** or certain directories to the cloud, listen and then upload file modifications, and handle filters
- **Devised a dynamic scanning algorithm** that takes into account the number of directories and subdirectories to determine an efficient number of scanning threads to create

Previous: Javelin Capital Markets, LLC. (New York, New York)

Summer, 2014

Projects

Bring Me Food, Android and iOS Application

2014 - 2015

A refined version of Uber for crowd-sourcing the delivery of food.

- Client chooses menu items from a restaurant and a notification is sent to drivers in the area, who can then claim the order and send delivery status updates

iMessage Analyzer, Mac Application

2015

Analyzes all of a user's messages from the database on the computer

- Shows how friendships and texting habits change over time
- Predicts how likely you are to text a person based on the time and when they were last contacted. Auto-generated replies (Machine learning – decision trees)

Tinder Bot, Python GUI

2016

A Tinder bot that does the swiping for you

- Uses OpenCV to identify the face and certain facial components, and a neural network to predict swipes based off of facial components ie. hair/eye color
-

Languages & Technologies

- **Experienced:** Objective-C (Cocoa & iOS), Java (several paradigms), Python, R
- **Familiar:** SQLite, JavaScript (NodeJS & Parse), Bash, Vim, Git, LDIF
- **Java Frameworks & Projects:** Spring, Elasticsearch, JUnit, JBehave, MBean, Kafka
